

Maximise safety

Prevent breaches with alerts for drivers for breaks and monitor working hours in real-time to comply with fatigue laws.

Save costs & time

EWD will calculate time periods for you, reducing admin time from manual paperwork.

Schedule shifts with confidence

Assign jobs based on work hours left as well as ensuring rest and work times are within regulation when planning shifts.

NHVR approved

ELECTRONIC WORK DIARY

MTData has announced the release of an updated version of their Electronic Work Diary (EWD) product. The EWD product, which was first introduced in 2020, was developed specifically to meet the National Heavy Vehicle Regulator (NHVR) specification to obtain NHVR accreditation. This product has been enhanced in the new release to combine the existing driver management features of the MTData Fatigue product with the NHVR EWD.

This enhanced version of our EWD product has a renewed focus on assisting drivers with synchronizing their EWD with their Fatigue schedule. Allowing them to coordinate breaks and events seamlessly through a streamlined driver UI experience. The updated product will include several new features:

- Login and logoff options to sync EWD and Fatigue events
- Unification of Fatigue and EWD screens
- Inclusion of Fatigue non-driving work in the EWD
- More alerts and notifications for both drivers and transport operators

Transport operators will receive notifications about discrepancies between Driver EWD records and the more tightly managed Fatigue schedules. Drivers will receive alerts and notifications regarding their upcoming breaks and the time they have spent on breaks. This will help to ensure compliance and improve safety for heavy vehicle transport businesses.

One major new capability of the updated EWD product is the inclusion of alerts triggered when vehicles are moving, and drivers are attempting to complete a break. This issue was addressed in the MTData Fatigue module and this has now be extended to the EWD product, improving safety and compliance.

Overall, the updated EWD product from MTData aims to provide a comprehensive solution for driver management and compliance in the heavy vehicle transport industry. By improving the synchronization of EWD and Fatigue schedules and adding new functionalities and alerts, it will help to ensure the continued safety and compliance of MTData customers.
