## Digitise and automate Work Diary calculations

# Electronic Work Diary

MTData's NHVR approved Electronic Work Diary (EWD) is the digital solution your fleet needs elevate your fatigue management with less effort. An EWD is used to record work and rest activity electronically, which can be used as an alternative to Written Work Diaries (WWD). Drivers simply log work and rest times with a tap on the Talon in-cab tablet app. EWD records sync and calculate automatically saving paperwork time for drivers, while fleet managers get a live picture of fatigue across the fleet without chasing paper diaries or manual maths.

An NHVR approved EWD ensures fatigue compliance across your entire fleet as part of your Safety Management System (SMS). Every activity is GPS-timestamped and checked as it happens against Australian Fatigue Schemes (Standard, BFM and 2up). Upcoming break warnings, breach alerts, break countdowns and audit-ready records update as your fleet drives. Fleet managers can monitor risks before a problem arises. No more manual diary calculations and complexities of understanding fatigue schemes.

**NHVR approved EWD solution**

**SMS support & HVNL compliant**

**Proactive safety**

Prevent breaches with alerts for drivers for breaks and monitor compliance fleet-wide live.

**Save costs & time**

EWD will calculate activity times against fatigue schedules for you, reducing admin time and manual paperwork.

**Smarter rostering**

Plan shifts around the work hours drivers have left, not what the paperwork says at the end of the week.

**Built into what drivers already use**

One-tap logging on the Talon tablet app already in the cab, so there's nothing new to install or learn.

## Automatic fatigue calculations

EWD calculates rest and break requirements against the Standard and BFM schemes as records come in. 2up Driving is also supported as an option.

## Live compliance dashboard

See every driver's status at a glance, with a countdown to their next required break and a colour-coded breakdown of work, rest and non-compliant time.

## Breach detection, by severity

Breaches are flagged Minor, Substantial, Severe or Critical, so you know what needs attention first, backed by an Investigation Aid that shows exactly when and why a rule was triggered.

## Digital certification

Drivers confirm their records are accurate and certify them at the end of each shift, protecting the integrity of EWD compliance.

## Proactive alerting for drivers

Drivers get an alert if an upcoming break is required, based on their work time calculations, as well as overdue breaks. They no longer have to manually work out when they need to take their breaks and how long they have been driving.

## Audit-ready reporting

Compliance Chart and Tabular View give you a day-by-day breakdown for reviews or roadside intercepts, and Report Transfer sends a driver's last 28 days to a manager or Authorised Officer in one tap.
